Abstracts

Dry Bicarbonate Hemodialysis Concentrate is a specially formulated powdered compound used in hemodialysis procedures to prepare the bicarbonate solution required for dialysate. It typically contains sodium bicarbonate in a dry, stable form, which is mixed with purified water and an acid concentrate at the point of care to create the final dialysate solution. This solution helps maintain the patient's acid-base balance by neutralizing excess acid in the blood, a crucial process for individuals with end-stage renal disease undergoing dialysis. Compared to liquid bicarbonate solutions, the dry concentrate offers advantages such as improved shelf life, easier storage, and reduced transportation costs, making it a practical choice for dialysis centers seeking efficiency and reliability.

The global Dry Bicarbonate Hemodialysis Concentrate market size was estimated at USD 914.99 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
