Dry, Condensed and Evaporated Milk are different types of dairy products that have been processed to remove some or most of the water content. They have a longer shelf life and can be used in various recipes and applications. Here are the definitions of each product in detail:

Dry Milk: Also known as powdered milk or milk powder, this is a product that has been dehydrated to a powder form. It can be reconstituted with water or used as an ingredient in baking, confectionery, and other food products. Dry milk can be made from whole, low-fat, or skim milk.

Condensed Milk: Also known as sweetened condensed milk, this is a product that has been evaporated to remove about 60% of the water content and then sweetened with sugar. It has a thick, creamy, and caramelized texture and flavor. Condensed milk is often used in desserts, such as pies, cakes, fudge, and ice cream.

Evaporated Milk: Also known as unsweetened condensed milk, this is a product that has been evaporated to remove about 60% of the water content, but without any added sugar. It has a light color and a slightly cooked taste. Evaporated milk can be used as a substitute for fresh milk or cream in cooking, baking, and beverages.
