Dry Cutting Gear Shaping Machine is a gear processing equipment that uses dry cutting technology. It is mainly used to efficiently and accurately process gear parts such as spur gears and helical gears. Unlike traditional wet gear shaping machines, dry gear shaping machines do not use cutting fluid during the processing process. By optimizing tool materials and machine tool structures, high-speed and high-precision gear processing is achieved, while reducing environmental pollution and processing costs. Its core advantages are energy saving and environmental protection, high processing efficiency and low maintenance costs.

The global Dry Cutting Gear Shaping Machine market size was estimated at USD 1569.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
