## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dry Dialysis Bag competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Dry dialysis bags are semi-permeable membrane bags that are pre-dried and not soaked in dialysis fluid. They are commonly used for the purification of biological molecules (such as proteins or peptides) by dialysis. When used, they need to be pre-treated (activated and hydrated) in an appropriate buffer, and then loaded with samples. By selectively passing small molecule impurities, the purpose of sample desalination, buffer exchange or small molecule removal can be achieved. Compared with wet-packed dialysis bags, dry dialysis bags are easier to store and transport, and have a longer shelf life.

The global Dry Dialysis Bag market size was estimated at USD 274.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
