Report Overview

Dry Eye Syndrome (DES) is a chronic and often progressive condition characterized by insufficient lubrication and moisture on the surface of the eye, leading to symptoms such as irritation, redness, blurred vision, and discomfort. The condition arises due to either decreased tear production or excessive tear evaporation, often influenced by factors like aging, prolonged screen time, environmental conditions (e.g., dry climates or air pollution), contact lens use, or underlying medical conditions such as autoimmune diseases. The market for DES treatments is driven by increasing prevalence, particularly among aging populations and frequent digital device users, as well as growing awareness and demand for advanced therapeutic solutions beyond traditional artificial tears, including prescription medications, anti-inflammatory therapies, and innovative devices like punctal plugs or intense pulsed light therapy. The competitive landscape includes pharmaceutical companies, medical device manufacturers, and over-the-counter product providers, all striving to address unmet needs in symptom management and long-term ocular health.
