Report Overview:

Dry Film Lubricants, also referred to as dry lubes or solid film lubes, provide protection from damage during relative movement and to reduce friction and wear. They have very high lubricating properties allowing applications where one wishes to reduce friction and cannot have wet greases or oils present. Though they may be used as a replacement to greases and oils, they are sometimes used as a “back-up” lubricant, under the grease so that lack of addition of grease will not cause failure.

The Global Dry Film Lubrication Coatings Market Size was estimated at USD 85.50 million in 2023 and is projected to reach USD 106.32 million by 2029, exhibiting a CAGR of 3.70% during the forecast period.
