Abstracts

Dry film preservatives are specialized chemical additives incorporated into paints, coatings, adhesives, and polymer-based materials to prevent microbial growth?such as mold, mildew, algae, and fungi?on the surface of dried films, thereby enhancing product durability, maintaining appearance, and preventing material degradation in humid or wet environments. These biocides function by creating a protective layer that inhibits microorganisms from colonizing and breaking down the substrate, making them essential in both interior and exterior applications across construction, automotive, marine, and industrial sectors where moisture exposure is a concern.

The global Dry Film Preservatives market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
