Abstracts

Dry film thickness testing is a specialized testing service designed to assess the thickness of a coating after drying and curing, typically measured in microns (μm). This service utilizes non-destructive testing techniques to accurately measure coating thickness without damaging the coating or substrate to ensure compliance with design specifications, quality standards, or industry regulations. Dry film thickness directly impacts a product's corrosion resistance, mechanical strength, insulation properties, wear resistance, and aesthetics, making this service crucial in manufacturing, construction, electronics, automotive, aerospace, and other fields. Services typically include on-site testing, laboratory analysis, report generation, comparison to standards (such as ISO, ASTM, and SSPC), and quality control recommendations.

The global Dry Film Thickness Testing Services market size was estimated at USD 923.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
