## Abstracts

A Dry Gas Seal (DGS) is a type of sealing system used in compressors to prevent the leakage of process gases. Unlike traditional wet seals that rely on a liquid lubricant, dry gas seals operate without any liquid lubrication. These seals are commonly employed in high-pressure applications, such as those found in air compressors and gas compressors.

**Growing Demand in Oil and Gas Industry:** The oil and gas industry is a major consumer of compressors, and the demand for dry gas seals has been influenced by the growth in exploration and production activities. As oil and gas operations expand, the need for reliable sealing solutions in compressors has increased.

**Advancements in Technology:** Ongoing advancements in materials and design have enhanced the performance and reliability of dry gas seals. Manufacturers are investing in research and development to create seals that can withstand higher pressures, temperatures, and harsh operating conditions.

**Global Expansion:** The demand for compressors and associated sealing technologies, including dry gas seals, has been influenced by global economic trends. As industrialization continues in various regions, the need for reliable compression systems is likely to drive market growth.

**Focus on Predictive Maintenance:** Industries are increasingly adopting predictive maintenance strategies, and the monitoring of dry gas seals is no exception. Advanced sensor technologies and analytics play a role in predicting and preventing seal failures, reducing downtime, and enhancing overall system reliability.

The global Dry Gas Seal for Compressor market size was estimated at USD 452.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
