Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dry Molded Fiber Tableware competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of dry molded fiber tableware reached 687,600 tons in 2024, with an average selling price of US\$2,292 per ton. Dry molded fiber tableware refers to disposable or biodegradable tableware made primarily from plant fibers (such as bagasse, bamboo pulp, and wood pulp). This material is wet-pulped, dehydrated, and dried, then manufactured using a high-temperature, high-pressure, dry-pressing molding process. This process uses minimal or no chemical adhesives during the molding process. Instead, heat and pressure create physical bonds between the fibers, resulting in tableware with a certain strength and heat resistance.

The global Dry Molded Fiber Tableware market size was estimated at USD 1576.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
