Report Overview

Dry offset printing is a popular method of printing on plastic pails and other cylindrical or conical-shaped objects. Dry offset, also called Letterset, or Indirect Relief Printing, is an offset printing process combining the characteristics of letterpress and offset. A special plate prints directly onto the blanket of an offset press, and the blanket then offsets the image onto the paper. The process is called dry offset because the plate is not dampened as it would be in the offset lithography process. This technology usually uses a special plate and ink system to ensure that no water is used during the printing process.

The global Dry Offset Printing market size was estimated at USD 152 million in 2023 and is projected to reach USD 291.42 million by 2032, exhibiting a CAGR of 7.50% during the forecast period.
