Abstracts

Dry OLTC is an oil-free on-load tap changer used to adjust the output voltage by changing the effective number of turns of the transformer winding when the transformer is running under load. This device allows voltage regulation without interrupting the power supply, thereby improving the flexibility and stability of the power system. The dry OLTC adopts an oil-free design, which avoids the problems of oil leakage and pollution that may exist in oil-immersed equipment, and improves the reliability and environmental protection of the equipment. OLTC can adjust the voltage when the transformer is running under load without interrupting the power supply, ensuring the continuous and stable operation of the power system. The dry OLTC has been carefully designed and manufactured, with high reliability and durability, and can operate stably in various harsh environments. Modern dry OLTCs are usually equipped with intelligent control systems, which can realize functions such as remote monitoring, fault diagnosis and automatic adjustment, and improve the intelligence level of the equipment. Dry OLTC is widely used in power systems, renewable energy, high-voltage direct current transmission and other fields. With the growth of global electricity demand and the development of renewable energy, the dry OLTC market will continue to expand. At the same time, with the continuous advancement and innovation of technology, the performance and functions of dry OLTC will continue to improve to meet the diverse needs of the market. As one of the key equipment in the power system, the market size of the dry OLTC market continues to expand with the increase in global electricity demand. Especially in the rise of emerging markets, such as China and India, the rapid development of their power industry has provided huge growth momentum for the dry OLTC market. The dry OLTC market covers a variety of product types and application areas, including the power industry, renewable energy, high-voltage direct current transmission, etc. With the diversification of market demand, the functions and performance of dry OLTC products are also constantly improving to meet the needs of

different fields. In addition, with the improvement of global environmental awareness, the dry OLTC market is also showing an environmental protection trend. Environmentally friendly dry OLTC products have the characteristics of low energy consumption and low emissions, meet the requirements of sustainable development, and gradually become the mainstream products in the market. In summary, with the rapid development of the global power industry and the continuous advancement of technology, the dry OLTC market will continue to maintain a rapid growth trend.
