### Report Overview

Dry permanent magnetic separator is a kind of equipment used for magnetic separation of granular materials, which is often used in the processing of ore, slag and other powdery materials. It uses the magnetic field generated by a permanent magnet to separate magnetic particles from non-magnetic particles. The main components of dry permanent magnetic separator include permanent magnetic drum, conveyor belt system and sorting system. The permanent magnet drum is the most critical part, and it is equipped with high-strength permanent magnets inside to generate a strong magnetic field. The material enters the magnetic field area through the conveyor belt system. When the magnetic particles pass through the permanent magnet drum, they are attracted by the magnetic force and are adsorbed on the surface of the drum, while the non-magnetic particles continue to pass through, realizing the separation of magnetic particles and non-magnetic particles.

Dry permanent magnetic separators have some advantages over traditional wet magnetic separators. First of all, it does not require the use of water or other liquid media, so it can avoid environmental pollution and water resource consumption caused by the water treatment process. Secondly, dry magnetic separation can be applied to some materials that are not suitable for wet treatment, such as particles with good drying performance. In addition, the dry magnetic separator also has the characteristics of simple structure and convenient operation.

Dry permanent magnetic separator is widely used in mining, metallurgy, building materials, chemical industry and other fields to extract magnetic minerals from ores, recover metals, separate slag, etc. It has important application value in resource

utilization, waste disposal and environmental protection.
