Abstracts

Dry pressed magnetic tiles are a type of permanent magnet component manufactured through a dry pressing process, where powdered magnetic materials—typically ferrite or rare-earth compounds—are compacted under high pressure in a die without the use of liquid binders before being sintered to achieve final magnetic and mechanical properties. These tiles are characterized by their high dimensional accuracy, uniform density, and strong magnetic performance, making them suitable for applications requiring precise shapes and reliable magnetic fields, such as in motors, sensors, loudspeakers, and various industrial and consumer electronic devices. The dry pressing technique allows for efficient mass production of complex geometries with consistent quality, offering advantages in cost-effectiveness and performance stability compared to wet pressing or injection molding methods.

The global Dry Pressed Magnetic Tile market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
