Report Overview

The dry screw vacuum pump is a high-tech product. It is a vacuum pump that uses a pair of screws to rotate synchronously at high speed in opposite directions in the pump housing to produce suction and exhaust. The two screws are finely balanced, supported by bearings, and installed in the pump housing. There is a certain gap between the screws, so when the pump is working, there is no friction between them, and the operation is stable and low noise. Since the working chamber does not require lubricating oil, the dry screw vacuum pump can remove gases containing a large amount of water vapor and a small amount of dust. The ultimate vacuum is higher, the power consumption is lower, and it has the advantages of energy saving and maintenance-free.
