Report Overview

Dry Shotcrete Machines is a device for shotcrete, which forms a uniform concrete layer or structure by spraying concrete material to a predetermined area together with compressed air or pneumatic mechanical force. Dry Shotcrete Machines use compressed air or pneumatic mechanical force to spray pre-prepared dry concrete materials (including cement, aggregate, sand and additives, etc.) from the spray gun to the target surface. During the spraying process, the concrete material is impinged and accelerated by the air, tightly bonded to the target surface.
