Abstracts

Dry Storage Casks for Spent Fuel are specially designed containers used to safely store spent nuclear fuel after it has cooled in a spent fuel pool. These casks provide shielding and containment to prevent radiation exposure and environmental contamination. Typically made of steel and concrete, they are designed to withstand extreme conditions, including earthquakes and impacts. Dry storage casks are used as an interim solution for long-term nuclear waste management, allowing spent fuel to be stored securely on-site at nuclear power plants or at designated storage facilities until a permanent disposal solution is available.

The global Dry Storage Casks for Spent Fuel market size was estimated at USD 1385.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
