Abstracts

Dry type outdoor termination refers to a specialized electrical component used in power distribution systems, designed to terminate high-voltage cables outdoors without the need for liquid or gas insulation, instead utilizing solid dielectric materials such as silicone rubber or ethylene propylene rubber to provide insulation, environmental protection, and resistance to moisture, UV radiation, and temperature fluctuations. These terminations are critical for connecting underground or submarine cables to overhead lines, transformers, or switchgear in substations, and their dry construction eliminates maintenance concerns associated with fluid-filled systems while ensuring reliability, safety, and compliance with industry standards for electrical insulation and mechanical durability in harsh outdoor conditions.

The global Dry Type Outdoor Termination market size was estimated at USD 345.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
