With advances in technology, the completion of the sequencing of the human genome and the pressures of capitalism, direct to consumer (DTC) laboratory testing is becoming increasingly popular. The growing market for DTC laboratory testing may promote awareness of health issues and genetic diseases, which could allow patients to take a more proactive role in their healthcare. A significant driver in the direct-to-consumer testing market is the increasing consumer interest in proactive health management and accessibility to personalized health information. These tests offer convenient access to genetic, wellness, and diagnostic information without the need for traditional healthcare intermediaries. However, a notable challenge in this market is the need for rigorous quality control and accurate interpretation of test results.
