Abstracts

DTF Printer (Direct-to-Film Printer) is a professional printing device used in DTF (film transfer) printing process. It can print patterns on PET transfer film with high precision, and then transfer the patterns to textiles and other materials through hot melt adhesive powder. DTF printer uses special water-based pigment ink, including white ink and four-color ink, to achieve rich and saturated color effects on light and dark fabrics. Compared with traditional DTG (direct garment printing) technology, DTF printer has the advantages of adapting to a wide range of materials and easy operation, and is suitable for small batch and diversified customized printing.

The global DTF Printer market size was estimated at USD 667.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
