Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dual-Arm Mobile Platform competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The dual-arm mobile platform is a composite robot system formed by installing two high-degree-of-freedom mechanical arms (usually 6-axis or 7-axis) on a chassis with autonomous mobility (AGV/AMR). It integrates perception, path planning, obstacle avoidance, autonomous positioning and multi-arm collaborative operation capabilities, and can achieve precise collaboration and flexible operation of human-like hands in a dynamic environment. Compared with single-arm or fixed robots, the dual-arm mobile platform can not only synchronously or asynchronously perform complex tasks such as assembly, grasping, handling, and plugging, but also has functions such as cross-regional operation, autonomous obstacle avoidance, and automatic charging. It is a key technology carrier in the field of "mobile manipulation".

The global Dual-Arm Mobile Platform market size was estimated at USD 185.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.30% during the forecast period.
