Abstracts

A dual axis laser micrometer is a non-contact precision measurement instrument that utilizes two perpendicular laser beams to simultaneously capture dimensional data in both the X and Y axes, enabling rapid and highly accurate assessment of external geometries such as diameters, widths, lengths, and ovality of objects without physical contact. These devices typically employ scanning lasers or CCD arrays to detect shadows cast by the measured object, calculating dimensions based on the time or position of beam interruption, and are valued for their ability to perform high-speed inspections with micron-level precision even on delicate, hot, or moving targets in industrial environments.

The global Dual Axis Laser Micrometer market size was estimated at USD 185.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
