Abstracts

Dual axis MEMS gyroscopes are microelectromechanical systems (MEMS) sensors that measure angular velocity around two perpendicular axes simultaneously, providing precise motion sensing and stabilization in a compact, power-efficient form. These devices operate on the principle of detecting Coriolis force-induced displacements in vibrating microstructures, converting mechanical motion into electrical signals, and are widely used in applications requiring multi-axis orientation tracking, vibration compensation, or rotational movement detection. Key characteristics include their small size, low cost, high reliability, and integration capabilities with other sensors like accelerometers and magnetometers, making them fundamental components in consumer electronics, automotive systems, industrial equipment, aerospace, and robotics for functions such as image stabilization, navigation, gesture control, and platform stabilization.

The global Dual Axis Mems Gyroscope market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
