## Abstracts

Dual chamber orifice fittings are specialized components used in the oil and gas industry for the accurate measurement of natural gas and liquid flow rates through pipelines. They consist of two separate, sealable chambers—the upper and lower chambers—which allow for the safe removal, inspection, or replacement of the orifice plate without interrupting the flow of the process fluid. This design enhances operational safety by containing potential leaks, reduces maintenance downtime, and ensures measurement integrity, making them critical in applications where continuous flow and precise metering are essential, such as in custody transfer, allocation metering, and fiscal measurement systems.

The global Dual Chamber Orifice Fitting market size was estimated at USD 128.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
