## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dual-Channel Microwave Therapy Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Dual-Channel Microwave Therapy Device production reached approximately 4398 units, with an average global market price of around K US\$ 12.8 per unit. A Dual-Channel Microwave Therapy Device is an advanced physical therapy equipment featuring two independent microwave output channels. It utilizes two separate magnetron systems to generate specific frequency microwave energy, transmitted through dual coaxial cables to two treatment probes, enabling synchronous precise treatment of two different body parts or different depths of the same area. Equipped with dual-channel independent power control systems, real-time temperature monitoring modules, and intelligent safety protection devices, it operates at 2450MHz±30MHz with independently adjustable output power ranging from 10-200W per channel. Featuring high treatment efficiency, flexible operation, and wide applicability, it can simultaneously meet the treatment needs of multiple patients or multiple areas of the same patient. The gross profit margin of the dual-channel microwave therapy device industry is about 30% -45%, and the annual production of a single production line is about 300-500 units. The cost of raw materials (dual magnetron system, independent control module, dual cable components, enhanced heat dissipation system) accounts for about 55% -60%, R&D and system integration (dual channel coordination algorithm, electromagnetic compatibility design) accounts for 20% -25%, quality control and medical certification account for 10% -15%, and marketing and professional technical support account for 8% -12%. The cost of dual magnetron and independent control system increases by about 40% compared to single channel equipment. Global medical institutions purchase approximately 3-5 thousand dual

channel microwave therapy devices annually, with tertiary and specialized hospitals accounting for over 70%. The demand for large rehabilitation centers is growing rapidly. The annual demand for upstream core components is about 150000 to 200000 sets, and the market size for high-quality coaxial cables and heat dissipation components is about 300-500 million US dollars. Downstream is driven by the demand for improving medical efficiency and upgrading rehabilitation services.

The global Dual-Channel Microwave Therapy Device market size was estimated at USD 56.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
