## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dual Channel Video Encoder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of dual-channel video encoders (DVCs) will reach approximately 210,000 units in 2024, with an average price of approximately \$410. These specialized encoders simultaneously compress, convert, and transmit two independent video sources in real time. They are widely used in security surveillance (dual-camera systems), in-vehicle video recording and surround view, medical image acquisition, distance education, live streaming, and multi-view surveillance centers. Compared to single-channel products, the dual-channel design effectively reduces device count, cabling, and power consumption in multi-camera systems, while ensuring synchronization and consistent image quality. It supports mainstream H.264/H.265 standards and multi-protocol streaming. Its upstream supply primarily relies on video capture chips, DSP/FPGA processors, storage, and network modules, while its downstream supply connects with security integrators, automotive electronics manufacturers, streaming platforms, and system integration service providers, forming a complete supply chain from semiconductors to end-user applications.

**Product Overview**Dual-channel video encoders are widely used in scenarios such as security surveillance, vehicle-mounted monitoring, emergency command, live broadcasting, and lightweight industrial video recording, replacing existing equipment. For example, in small and medium-sized surveillance environments, a single dual-channel video encoder can support the connection of two HD cameras, making it suitable for small-scale deployments such as retail stores, public transportation, and campus entrances.

**Supply Situation**Upstream raw materials primarily include video codec chips, DDR memory chips, network transmission modules, metal or plastic housings, and

power management ICs. Typical suppliers include HiSilicon Semiconductor, Ambarella, Micron, Realtek, and Delta Electronics. Manufacturer Features Kiloview specializes in portable and low-latency encoding solutions, widely used in mobile live broadcasting and emergency response scenarios; IndigoVision specializes in security surveillance, emphasizing high reliability and compatibility with centralized management platforms; Z3 Technology offers high-compression H.265 dual-channel products for broadcast and industrial vision applications; and DTC emphasizes anti-interference and highly secure transmission performance in emergency communications and military and police applications. Application Security Surveillance: Widely used in small retail stores, school entrances, and community security. Customers include Hikvision, Dahua, and IndigoVision. In-Vehicle and Mobile Surveillance: Video recording for buses, taxis, and police vehicles. Typical customers include BYD, Yutong Bus, and Police Fleet Solutions. Emergency and Military Command: Used in mobile command vehicles, emergency rescue, and tactical video transmission. Customers include DTC, Harris, and Motorola Solutions. Broadcasting and Live Streaming: Lightweight live broadcasts, outdoor events, or mobile live streaming. Customers include YouTube Live, ESPN, and BBC. Industrial and Scientific Research: Used for lightweight video capture and experimental scenarios. Customers include Siemens, Fraunhofer, and Mitsubishi Electric. Technology Trends Dual-channel video encoders are gradually evolving toward high compression ratios, low latency, and wireless capabilities. H.265/HEVC and AV1 are replacing traditional H.264 as mainstream standards. Low-latency transmission (less than 50ms) is in significant demand in emergency command and live streaming. PoE power supply and embedded AI analytics are beginning to converge, enabling encoders to not only handle transmission but also perform front-end intelligent recognition. However, the overall market is being replaced by four-, eight-, and 16-channel devices, with dual-channel products concentrating on portable, in-vehicle, and niche lightweight scenarios. Market Drivers Demand in the small and medium-sized security and vehicle-mounted video surveillance sectors remains stable, providing continued strong demand for dual-channel products. The rapid growth of mobile live streaming, emergency communications, and portable data collection applications has created incremental market space for low-channel encoders. With the upgrade of video compression standards such as H.265/AV1, user demand for device replacement is further driven. Furthermore, falling product prices have lowered the deployment threshold for retailers and small and micro businesses, further boosting adoption. However, this trend is also accelerating, with the replacement of large-channel encoders and NVRs (network video recorders), leading to the gradual transformation of dual-channel devices into supplementary solutions for smaller applications.

The global Dual Channel Video Encoder market size was estimated at USD 86.1 million

in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
