Abstracts

A dual core battery pack is an advanced portable power solution that integrates two independent lithium-ion battery cells or modules within a single enclosure, managed by an intelligent power management system that optimizes charging, discharging, and safety protocols. Unlike conventional single-cell power banks, this configuration allows for higher energy density, faster charging capabilities (often supporting technologies like Power Delivery or Quick Charge), and improved thermal management, enabling sustained high-power output for demanding devices such as laptops, gaming consoles, or professional cameras. The design typically includes multiple output ports (USB-A, USB-C, DC), input options for recharging (including solar or car adapters in some models), and features like pass-through charging, which permits simultaneous charging of the pack and connected devices. By offering greater efficiency, reliability, and versatility, dual core battery packs cater to users requiring extended off-grid power, rapid recharging, and compatibility with a broad range of electronics.

The global Dual Core Battery Pack market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
