Report Overview:

With the growing importance of camera performance to smartphone makers and users, manufacturers have worked hard to add features and to improve image quality. However, users also want thin phones, which greatly limits the size of the individual camera modules that can be used. The small Z-height, as the industry refers to the thickness of a phone, has caused designers to make use of the larger width and height of phones by adding additional cameras to their designs. Having multiple cameras has made an array of new features possible—zoom, better HDR, portrait modes, 3D, and low-light photography.

The Global Dual Lens Camera Smartphone Market Size was estimated at USD 698.71 million in 2023 and is projected to reach USD 1493.73 million by 2029, exhibiting a CAGR of 13.50% during the forecast period.
