Abstracts

Dual Light Sheet Microscope, often abbreviated as DSLM, is an advanced imaging technique that employs two orthogonal (perpendicular to each other) light sheets to illuminate a sample from two different directions simultaneously. This innovative setup enables high-resolution, three-dimensional (3D) imaging of biological samples with minimal photodamage and photobleaching. There are several ongoing trends in the field of dual light sheet microscopy that are shaping its development and potential applications. These trends include: 1. Integration with other imaging modalities: Dual light sheet microscopy is often combined with other imaging techniques, such as confocal microscopy or structured illumination microscopy, to enhance imaging capabilities. This integration allows for the simultaneous acquisition of multiple types of data, leading to a more comprehensive understanding of the imaged sample. 2. High-speed imaging: Dual light sheet microscopy is being optimized for high-speed imaging, enabling the capture of dynamic cellular processes in real-time. This trend is driven by advancements in camera technology, laser sources, and image processing algorithms. High-speed imaging allows researchers to study rapid cellular events, such as membrane dynamics or intracellular transport, with unprecedented temporal resolution. As an important part of the Asia-Pacific market, China's demand for double-light sheet microscopes is also increasing. With the improvement of domestic scientific research level and the increase in scientific research investment, the scale of double-light sheet microscopes in the Chinese market is also expanding year by year. The continuous innovation and advancement of dual-light sheet microscope technology has significantly improved its imaging quality, resolution and imaging speed. These technological advances provide strong support for the application of dual-light sheet microscopy in a wider range of fields. At present, the main manufacturers in the dual-light sheet microscope market include Zeiss, Miltenyi Biotec, Bruker, Leica, Nuohai, Viventis and Applied Scientific Instrumentation, etc. These manufacturers have strong strengths in

technology research and development, product innovation and market promotion.

The global Dual Light Sheet Microscope market size was estimated at USD 2057.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
