Report Overview

Dual-linear polarized horn antenna is a specialized type of horn antenna that supports the transmission and reception of two orthogonal linear polarizations simultaneously. It consists of a horn-shaped waveguide structure designed to generate and capture electromagnetic waves with specific linear polarization orientations.

The dual-linear polarized horn antenna is typically equipped with two orthogonal feed elements, such as dipole or slot elements, placed inside the waveguide. These feed elements are oriented at different angles to emit or receive electromagnetic waves with different linear polarizations.

This antenna configuration is commonly used in applications where simultaneous transmission and reception of two orthogonal linear polarizations are required. It finds applications in satellite communications, wireless MIMO (multiple-input, multiple-output) systems, and high-capacity point-to-point radio links.

The dual-linear polarized horn antenna allows for improved spectral efficiency, increased data rates, and enhanced signal performance by separating and utilizing two independent polarization channels for data transmission and reception.
