Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dual-mode Dual-SIM Satellite Smartphone competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Dual-mode dual-SIM satellite smartphones refer to smartphones that support two different network modes (such as ground cellular networks and satellite networks), have dual-SIM dual-standby functions, and can communicate via satellite. It breaks the limitation of traditional mobile phones relying on ground base station communications. In remote areas, areas with insufficient signal coverage, or when the ground network is paralyzed, satellite signals can be used to ensure the stability and timeliness of communications. Dual-mode terminal access mainly provides consumers with the basic function of direct mobile phone satellite connection. Dual-mode terminal access uses existing constellations and can quickly realize technical verification and application by adding satellite communication modules. It is the beginning of the construction of mobile phone direct satellite connection system. At present, dual-mode terminal access has entered the commercial application stage, and the direct connection function of mobile phones based on dual-mode terminal access is rapidly popularizing in mid-to-high-end models. However, this route relies on the non-standardized technical system unique to each satellite operator, which is not conducive to global ubiquitous interconnection. In addition, the current communication capabilities are mainly limited to voice and low-speed data services, and broadband data services are not supported for the time being (the current typical communication rate is 0.8~2.4kbit/s).

The global Dual-mode Dual-SIM Satellite Smartphone market size was estimated at USD 657.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 5.90% during the forecast period.
