Abstracts

Dual ovenable cook trays are specialized food packaging containers designed to withstand the thermal stresses of both conventional and microwave ovens, allowing for convenient heating, cooking, and serving of prepared meals without the need for repackaging. Typically constructed from materials such as crystallized polyethylene terephthalate (CPET), paperboard with specialized coatings, or high-temperature-resistant plastics, these trays must maintain structural integrity at temperatures up to 220?C (428?F) in conventional ovens while remaining microwave-safe. They are widely used in the frozen and ready meal sectors, offering durability, functionality, and compatibility with automated filling and sealing processes in food manufacturing. The design often incorporates features such as vented lids, compartmentalization for meal components, and aesthetic printing to enhance brand appeal and consumer convenience.

The global Dual Ovenable Cook Trays market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
