Abstracts

The Dual Planetary Slurry Mixing Solution is a slurry mixing technical approach based on a dual planetary mixing device. In this solution, the dual planetary mixer employs a unique motion mode combining revolution and rotation, enabling the mixing paddles to create a complex and efficient three-dimensional mixing trajectory within the container. The paddles apply various forces such as shearing, dispersing, and mixing to the slurry, promoting thorough contact and uniform distribution of all components, thus achieving a highly homogeneous slurry state with adjustable mixing parameters according to slurry properties.

The global Dual Planetary Slurry Mixing Solution market size was estimated at USD 230.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
