Abstracts

Dual plate check valves, also known as double-door or wafer check valves, are specialized flow control devices designed to permit fluid flow in one direction while automatically preventing reverse flow when fluid pressure drops. These valves consist of two spring-loaded hinged discs (plates) mounted on a central hinge pin within a compact body, which close rapidly upon flow reversal to minimize water hammer and pressure surges. Characterized by their lightweight construction, short face-to-face dimensions, and lower pressure drop compared to swing check valves, they are engineered for efficiency in applications requiring quick response and space savings. Commonly used in water and wastewater systems, oil and gas pipelines, power generation, and industrial processes, dual plate check valves offer advantages in installation flexibility, maintenance reduction, and operational reliability under varying pressure conditions.

The global Dual Plate Check Valves market size was estimated at USD 620.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
