### Report Overview

The temperature and pressure integrated sensor combines the dual layer characteristics of temperature sensors and pressure sensors. It has the advantage of measuring both temperature and pressure. Its structural design generally involves adding a temperature sensor probe below the pressure sensor, so its shape is different from that of a conventional pressure sensor and is also different from that of a regular temperature sensor. The dual pressure and temperature sensor are a dual output pressure and temperature sensor that monitors the pressure and temperature signals of oil and refrigerant. The product has good reliability and long service life, and is suitable for working in harsh environments.

The global Dual Pressure and Temperature Sensors market size was estimated at USD 277.70 million in 2023 and is projected to reach USD 1346.58 million by 2030, exhibiting a CAGR of 25.30% during the forecast period.
