## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dual-Rotor Yokeless Axial-Flux Motor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Twin-rotor yokeless axial flux motor An electric motor featuring two rotors sandwiching a stator, with a design that eliminates the traditional stator yoke (back iron). This "yokeless" construction allows the magnetic flux to pass axially (along the motor's axis of rotation) through the air gap between the rotor and stator, creating a shorter, more direct force path. This design typically has higher torque density (torque per unit volume) and potentially improved efficiency compared to traditional radial flux motors or single-sided axial flux motors.

The global Dual-Rotor Yokeless Axial-Flux Motor market size was estimated at USD 512.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
