Abstracts

Dual-Sided Flying Probe Testers are automated electronic testing machines designed to inspect printed circuit boards (PCBs) by using multiple moving probes that can access both sides of the board simultaneously. Unlike traditional testing methods that require custom fixtures, dual-sided flying probe testers use 'flying' probes that move freely to make contact with designated test points on the PCB. This approach allows for flexible, fixtureless testing that can handle complex PCB designs with high component density.

The global Dual Sided Flying Probe Testers market size was estimated at USD 143.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
