## Abstracts

A Dual Syringe Diluter is a laboratory instrument used to dilute a sample by mixing it with a solvent or diluent. It utilizes two syringes to perform the dilution process, allowing for accurate and precise control of the amount of both sample and diluent. The two syringes work together, one for the sample and one for the diluent, providing a high degree of accuracy when preparing samples for analysis or further experimentation. This is especially useful in applications that require precise dilutions, such as in chemical analysis, biological research, and pharmaceutical testing.
