The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dual-Temperature Chiller competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Dual-Temperature Chiller reached approximately 55,000 units, with an average selling price of approximately US\$12,000 per unit. Dual-Temperature Chiller is integrated refrigeration units with two independent refrigeration and temperature control systems, capable of providing two different cold water temperatures and flows to the same equipment, meeting the cooling needs of different components at varying temperatures. These units are widely used in laser equipment, electronics manufacturing, injection molding, and other fields. By providing independent high and low temperature cooling, they improve production efficiency, effectively prevent condensation, and ensure product quality.
