Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dual Track Dispensing Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The dual-track dispensing machine is an automated dispensing device equipped with two parallel and spaced conveying tracks, which realizes dual-station synchronous operation by independently transmitting the carrier. Its core design includes a vertically set magazine loading mechanism, which can complete the magazine clamping, material distribution and linear push of the carrier to the conveying track, and realize the vertical lifting and horizontal displacement of the carrier between the plug-in space and the track through the lifting component and the material shifting component, and finally position the carrier to the dispensing platform for precision processing. The equipment adopts a PLC control system and a servo motor to drive the ball screw, which can program the three-dimensional/four-dimensional path dispensing parameters, support AB glue automatic ratio and vacuum infusion system, and ensure 0.01mm dispensing accuracy in electronic packaging, automotive parts gluing and other scenarios. The dual-track architecture shortens the loading and unloading time by 50% through alternating operations, and cooperates with the SD card storage function to realize the rapid synchronization of multi-machine process parameters. It is suitable for high-capacity demand scenarios such as smart terminal shell bonding and LED module potting.

The global Dual Track Dispensing Machine market size was estimated at USD 369.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
