Abstracts

Dual wall heat shrink tubing, also known as adhesive-lined or dual-wall adhesive heat shrink tubing, is a specialized type of tubing composed of an outer layer that contracts radially when heated and an inner layer of thermoplastic adhesive that melts during the shrinking process, creating a strong, flexible, and environmentally sealed barrier against moisture, dust, chemicals, and mechanical stress. This product is engineered to provide both insulation and environmental protection, making it distinct from single-wall heat shrink tubing by offering enhanced sealing properties that prevent the ingress of liquids and gases, thereby ensuring long-term reliability for electrical connections, wire splices, and component protection in demanding conditions.

The global Dual Wall Heat Shrink Tubing market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
