## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ductile Iron Grate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global ductile iron grate production reached 2,016,000 tons, with an average selling price of \$942 per ton. Ductile iron grates are high-strength drainage and load-bearing components manufactured primarily from ductile iron through casting, heat treatment, machining, and anti-corrosion coating. They offer high strength, impact resistance, and corrosion resistance. They are primarily used in municipal roads, underground pipe systems, airports, ports, parking lots, and industrial plants for stormwater drainage, ditch coverage, and underground facility protection. Global ductile iron grate production is primarily concentrated in China, India, Europe, and Southeast Asia, with China being the world's largest producer and exporter. Upstream resources include ductile iron raw materials (pig iron, scrap steel, nodulizers, inoculants) and high-temperature-resistant mold steel; downstream customers include municipal engineering contractors, real estate developers, and road and rail transit system suppliers. The industry's average gross profit margin is approximately 15-25%, with high-tech or corrosion-resistant products boasting margins exceeding 30%.

The global Ductile Iron Grate market size was estimated at USD 1899.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
