The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ductile Iron Gutter Grate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global ductile iron gutter grate production reached 882,000 tons, with an average selling price of US\$704 per ton. Ductile iron gutter grate is a load-bearing drainage component used in surface drainage systems. Primarily made of high-strength ductile iron, it is installed on the sides of roads, factory trenches, parking lot drains, and tunnel drainage systems to collect surface runoff and rainwater and direct it to underground pipe networks. It features excellent mechanical properties, high compressive strength, corrosion resistance, and a long service life. It is widely used in municipal engineering, road transportation, urban drainage, flood control systems, and industrial infrastructure construction. Global ductile iron grate production is primarily concentrated in China, India, and parts of Europe. Upstream suppliers include pig iron, scrap steel, spheroidizers, inoculants, and mold steel; downstream suppliers include municipal infrastructure construction, real estate development, road construction, and water conservancy and drainage engineering companies. The price of ductile iron grate is significantly influenced by raw material prices, processing technology, anti-corrosion treatment, and transportation costs, with an average industry gross profit margin of approximately 15-25%.

The global Ductile Iron Gutter Grate market size was estimated at USD 621.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
