Report Overview

Mini-split systems are a type of ductless heating and cooling. In place of delivering conditioned air to the entire residence with a network of air ducts, they heat and cool a single room at a time. This allows more advanced temperature control, increasing comfort and energy efficiency. Mini-splits most closely resemble heat pumps in the way they operate. Both kinds of equipment provide electric cooling, just like an air conditioner. This involves using refrigerant to draw out heat from in a building and issuing that warmth outside. Then, a reversing valve permits the system to run backward, warming your residence in the winter by removing heat from outdoor air and bringing it inside.

The global Ductless Heating And Cooling Split System market size was estimated at USD 24580.35 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.45% during the forecast period.
