Abstracts

A dust extraction system is a comprehensive network of equipment designed to capture, filter, and remove hazardous airborne particles?such as dust, chips, and fumes?generated during industrial processes like woodworking, metalworking, construction, or manufacturing. These systems typically include hoods or capture points, ductwork, a powerful fan or blower to create suction, and filtration units (e.g., cyclones, baghouses, or HEPA filters) that separate particulates from the air before either recirculating cleaned air or exhausting it safely. Their primary function is to maintain air quality, protect worker health, ensure regulatory compliance, reduce fire or explosion risks, and preserve machinery performance by minimizing abrasive dust accumulation.

The global Dust Extraction System market size was estimated at USD 1480.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
