Abstracts

Dust suppression chemicals are specialized formulations designed to mitigate the generation and spread of airborne particulate matter across various industrial, construction, mining, and agricultural environments. These products function through mechanisms such as moisture retention, agglomeration, or crust formation, binding fine dust particles to surfaces and reducing their susceptibility to becoming airborne due to wind, traffic, or mechanical disturbances. They are typically applied as liquid solutions or emulsions and may include surfactants, polymers, hygroscopic salts, or biodegradable binders tailored to specific soil types, climatic conditions, and operational requirements. The effectiveness of these chemicals is measured by their ability to provide long-lasting dust control, minimize water usage, resist erosion, and maintain safety and environmental compliance.

The global Dust Suppression Chemical market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
