## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dustless Vacuum Sanding Block competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global annual sales of dustless vacuum sanding blocks will reach approximately 11.6 million units, with an average price of approximately US\$36 per unit and a gross profit margin of approximately 29%. Dust-free vacuum sanding blocks are manual abrasive tools that build upon traditional hand sanding blocks with additional vacuum channels and connectors. These blocks can be integrated with vacuum systems to extract dust in real time when sanding wood, metal, automotive paint, or composite surfaces, significantly reducing particulate contamination in the operating environment and improving worker health and workpiece surface quality. These products are typically made of lightweight plastic or polyurethane, with Velcro or clip-on structures on the bottom for quick sandpaper changes. They are widely used in furniture manufacturing, automotive after-sales service, ship repair, and DIY applications. The upstream supply chain primarily involves suppliers of engineering plastics, polyurethane foam, Velcro fabric, and vacuum connector accessories, while the downstream market relies on stable demand from furniture factories, auto repair shops, paint shops, and the DIY home improvement market. Festool has an annual production capacity of approximately 3.2 million units and maintains a leading position in the automotive aftermarket and painting markets; Mirka has an annual production capacity of approximately 1.8 million units and is widely used in the European furniture and woodworking industries.

The global Dustless Vacuum Sanding Block market size was estimated at USD 417.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

5.40% during the forecast period.
