### Report Overview

Textile dyestuffs typically include dyes such as acid dyes, basic dyes, direct dyes, disperse dyes, reactive dyes, sulfur dyes and vat dyes. These textile dyes are used to manufacture colored textile fibers. Basic dyes, acid dyes and disperse dyes are principally used in the production of black colored nylon textile fibers. Furthermore, various types of dyes such as reactive dyes, direct dyes and vat dyes are used for dyeing nylon textile fibers for specific applications. Textile dyestuffs are used to dye different types of nylon textile fibers such as monofilament fibers, staple fibers and multifilament fibers. These dyed textile fibers are used in various end-user industries such as home textiles, apparel, automotive textiles, agricultural textiles and protective clothing.

Increasing demand for technical textiles is likely to drive demand for dyestuff (black color) in the production of nylon textile fibers in the next six years. Furthermore, demand for dyestuff (black color) in the manufacture of nylon textile fibers is expected to increase significantly in the near future due to the continuous growth in the global apparels market. However, volatility in prices of raw materials and stringent environmental regulations on the usage of synthetic dyestuff may hamper growth of the dyestuff (black color) market for nylon textile fibers in the near future.
