Report Overview

The dynamic balance valve is used in the water system that needs flow control, especially for the flow control of non corrosive liquid media such as heating and air conditioning. One time adjustment before operation can automatically keep the system flow constant at the required set value. Feature 1. It can automatically balance the system flow at the required set value; 2. It can automatically eliminate the hydraulic imbalance caused by various factors in the water system, maintain the flow required by users, overcome the 'uneven cold and heat', and improve the room temperature qualification rate of heating and air conditioning; 3. It can effectively overcome the bad operation mode of 'large flow and small temperature difference', improve the system energy efficiency and realize economic operation.
