### Report Overview

Dynamic Pile Testing (DPT) is a method used to determine the load bearing capacity and integrity of foundation piles. The DPT instrument is used to perform this test in the field. The DPT instrument typically consists of a hammer that is dropped onto the pile, and sensors that measure the response of the pile to the impact. The hammer can be raised and lowered by a hydraulic system, and the impact force and velocity can be controlled. The sensors can be placed on the pile or in the soil around the pile to measure the acceleration and displacement caused by the impact.
